

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. - 21. (Cancelled)

22. (Currently Amended) In a device for selecting and recording an image of an irradiated or emissive object comprising complexes of DNA, RNA or proteins, the improvement comprising:

an immovable object holder for positioning the ~~structure~~ object in a stationary position,

at least one mirror for reflecting an image of the object, and

a camera, wherein at least one mirror is displaceable for selecting a part of the image from the reflected image of the object while holding the object in the stationary position.

23. (Cancelled).

24. (Previously Presented) The device as claimed in claim 22, wherein the at least one mirror is rotatable around a single rotation axis for the purpose of reflecting a chosen part of the image of the object to a viewing area.

25. (Cancelled).

26. (Previously Presented) The device as claimed in claim 22, wherein the device also comprises a radiation source for irradiating the object positioned by the object holder.

27. (Original) The device as claimed in claim 22, wherein the object holder takes a stationary form.

28. (Previously Presented) The device as claimed in claim 26, wherein the radiation source is disposed on the side of the object remote from the at least one mirror.

29. (Previously Presented) The device as claimed in claim 24, wherein the device also comprises drive means for rotating the at least one mirror.

30. (Original) The device as claimed in claim 22, wherein the device also comprises drive means for displacing the camera.

31. (Cancelled).

32. (Original) The device as claimed in claim 22, wherein the device is provided with an at least substantially radiation-sealed housing.

33. (Previously Presented) The device as claimed in claim 24, wherein the at least one rotatable mirror has an elongate form.

34. (Previously Presented) The device as claimed in claim 24, wherein the at least one rotatable mirror, rotatable axis and a drive means for rotation of the mirror are integrated with the camera.

35. (Cancelled).

36. (Currently Amended) A method for selecting an image to be recorded with a camera which forms a part of an irradiated or emissive object comprising complexes of DNA, RNA or proteins, by the steps of:

A) placing the object in stationary position on an immovable object holder,

B) reflecting an image of the object with at least one mirror, and

C) selecting with a camera and by displacing the at least one mirror a part of the image of the object to be viewed from the reflected image while holding the object in the stationary position.

37.-39. (Cancelled).

40. (Previously Presented) The method as claimed in claim 36, wherein the object placed in stationary position is irradiated with a radiation source.

41. (Cancelled).

42. (Previously Presented) The method as claimed in claim 36, wherein the object is irradiated from the side of the object remote from the at least one mirror.
